

State of the Services FY 2025 Report

October 2024 - September 2025

Engagement Events Highlights

NOAA Artificial Intelligence (AI) Workshop

Boulder, CO | September 15-16

- NOAA's 7th AI Workshop series concluded with a two-day hybrid collaboration with the National Center for Atmospheric Research (NCAR) at their Center Green facility, featured opening remarks from the Department of Commerce's Deputy Chief Data Officer Dr. Dominique Duval-Dior, as well as the Director of NCAR Dr. Everette Joseph.
- Presentations from NOAA researchers and partners fostered discussions on generative modeling for Earth and space science, including workflows, information services, and public and private partnerships.

Catastrophe (Cat) Risk Modeling Conference

Orlando, FL | February 25-26

- NCEI hosted a NOAA Tools Cafe at the Reinsurance Association of America's (RAA) Cat Risk Modeling Conference. The Tools Cafe showcased the updated Storms Event Database, datasets on wind, storm footprint, and Climate Monitoring resources.
- The meeting convened 700 participants, and industry members offered energetic support for the dedicated commitment NOAA has made to the sector, building on decades of NCEI's direct engagement with the RAA and their members. RAA members are experienced and well-established providers of reinsurance.

Product and Services Highlights

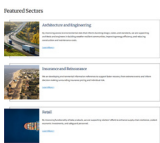

Space Weather Portal Now Publicly Available

The Space Weather Portal (SPOT) website was made publicly available. SPOT is a next generation cloud-native user portal hosted in the NESDIS Common Cloud Framework (NCCF). It will be the principal point of access for NESDIS partners and the general public to access, visualize, and download data from NOAA's space weather missions. SPOT can be used to provide access to any space weather dataset. This represents several important milestones for NCEI and NESDIS: SPOT is the first NCCF-based portal that is fully public; CCOR-1 is the first product fully produced in, archived in, and disseminated from the NCCF, and thus it is the first comprehensive product area workflow to be fully migrated and demonstrated in NCCF.

World Ocean Database Update

The World Ocean Database, the world's largest collection of unique, uniformly formatted, and quality-controlled ocean profiles, released its second update of 2025. As of July, the database contained over 19.3 million ocean profiles. From January to March 65,031 profiles were added, including over 44,000 Argo profiles, approximately 7,000 from instrumented marine mammals, and about 3,000 glider profiles. This was also the first update completed on the new AlmaLinux 9.6 operating system.

Featured Industry Landing Pages Unveiled

NCEI unveiled new industry landing pages spotlighting the real-world impact of environmental data on the Architecture & Engineering, Insurance and Reinsurance, and Retail sectors. These web pages showcase how environmental data empowers weather resilience for businesses, buildings and infrastructure, and the lives and livelihoods of U.S. citizens-- while also providing a shortcut to the most impactful environmental products used by the industry.

New Interactive StoryMaps

NCEI released two new story maps on NOAA's website to show the impact of NCEI data on industry. One of the new maps, the Hurricane Impact map, explains hurricane formation, their effects on the U.S., and how NOAA data and tools help both the public and industry prepare for and respond to future storms. The remaining map highlights the severe May 2024 weather outbreak that devastated the Midwest and caused billions in damages due to tornadoes, hail, and strong winds.

Stakeholder Highlights

NOAA participated virtually in the Unmanned Aircraft System Hurricane Symposium hosted by NOAA's Office of Marine and Aviation Operations Aircraft Operations Center and Uncrewed Aircraft Systems Division. This symposium brought together new and existing partners across NOAA and industry to collaborate and make progress towards a consensus on operational and research requirements through aviation platforms for hurricane season. Representatives from every NOAA Line Office, multiple branches of the Department of War, NASA, and academic and industry stakeholders participated in the symposium.

NCEI has wrapped up Phase 2 of the Department of War Naval Maritime Working Group effort, tasked to the Naval Oceanographic Office, to design and establish a global Bathymetric Data Repository (BDR). This team brought together multiple subject matter experts, data owners, and data users to design and establish requirements for a global BDR, a need driven by a request from the U.S. Navy Pacific fleet due to the lack of a combined data repository for various types of bathymetric surveys.

NCEI held a series of information sessions and demonstrations of the Atlas 15 pilot project to invite user feedback and facilitate co-development with the National Weather Service's (NWS) Office of Water Prediction (OWP). User interest in this product is exceptionally high, and feedback has been robust and encouraging. Responses were documented by NCEI and provided directly to the Atlas 15 development team in the OWP. This activity is a proof of concept for the NOAA Service Delivery Model.

As part of the Regional Climate Center (RCC) 40th anniversary celebrations in 2023, the six RCCs collaborated on a Bulletin of the American Meteorology Society article which was released in the October 2024 issue. The article highlights the history of the RCC program, the evolution of climate services, RCC services in action, and the future of regional climate services.

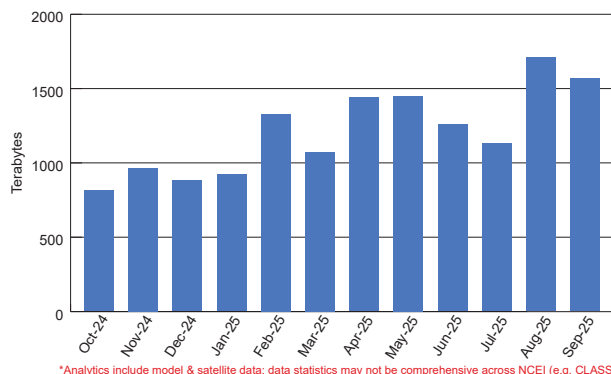

Upcoming Engagement

American Geophysical Union Annual Meeting	Dec. 15-19
American Meteorological Society Annual Meeting	Jan. 25-29
Retail Industry Leaders Association LINK Supply Chain Conference	Feb. 2-4

Customer Reach

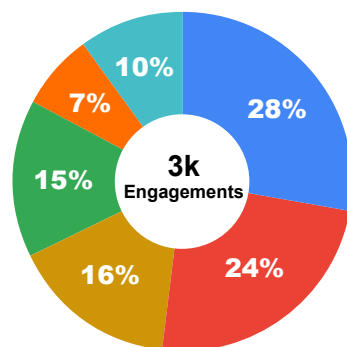

NCEI Makes Data Accessible

- 1.9B web hits and 4.14k TB of data delivered online*

U.S. Sectors Served

- Top Sectors
- Professional, Scientific, and Technical Services
- Other Services (except Public Administration)
- Educational Services
- Public Administration
- Finance and Insurance
- Others (Combined)

Unique Customer Requests

NCEI Fulfills Flood Information Requests:

NCEI fulfilled a Congressional request and numerous Freedom of Information Act requests for information related to the tragic flooding in Texas in July 2025, which resulted in at least 135 fatalities. NCEI leveraged the Service Records Retention System and NOAAPort databases to provide quantitative precipitation forecasts, rainfall projections, flash flood outlooks, NWS warning products, Flash Flood Warnings and all weather alerts issued to the public in affected areas.

Washington Post Data Request:

A Washington Post reporter contacted NCEI with questions regarding Hurricanes Helene and Milton in the Gulf of America. The reporter wanted to know whether a marine heatwave in the Gulf caused the formation of Hurricane Milton, and why this extreme hurricane behavior is being seen now. After answering their questions, the reporter was pointed to the ClimateReanalyzer site.
