

State of the Services FY 2025 Q3 Report

April 2025 - June 2025

Engagement Events Highlights

NOAA Artificial Intelligence (AI) Workshop Event

Virtual | June 9, 2025

- The 7th NOAA AI Workshop series held its second event this June, focusing on Generative AI (GenAI) for information services, with opening remarks from NOAA's Chief Data Officer and the National Weather Service's Office of Science and Technology Integration Chief Scientist.
- The workshop series will culminate in a hybrid event in September, in partnership with the National Center for Atmospheric Research. The event will include presentations from NOAA researchers and partners to inspire further discussions on innovation for GenAI.

NOAA Atlas 15 Engagements

Multiple Locations | April - June 2025

- In the last quarter, NCEI has held or attended 18 engagements with private and public stakeholders to showcase the upcoming NOAA Atlas 15 and to understand uses and best methods for providing the new data to the users.
- NCEI is conducting the engagements in partnership with the National Weather Service who leads development of NOAA Atlas 15, including precipitation frequency updates to support sectors such as engineers who use the data to design culverts and roads.

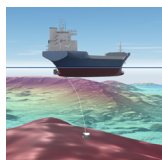

Product and Services Highlights

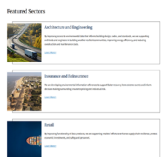

Modernizing the Natural Hazards Map Viewer

NCEI's Natural Hazards Map Viewer was recently upgraded with a re-design using modern web technologies and Environmental Systems Research Institute frameworks, resulting in increased performance and responsiveness, better usability on mobile devices, and improved accessibility. The Natural Hazards Map Viewer includes historical information on tsunamis, earthquakes, volcanic eruptions, and water level data. Long-term data from these historical events can be used to establish the past record of natural hazard event occurrences, which is important for planning, response, and mitigation of future events. NOAA's Tsunami Warning Centers use the Natural Hazards Map Viewer for situational awareness during the first hour of tsunami events.

New 3D Real-Time Display of ROV Operations aboard *Okeanos Explorer*

NCEI has completed development of a new near-real-time geospatial tracking system for NOAA Ship *Okeanos Explorer* and its remotely-operated vehicle (ROV) *Deep Discoverer*. Displayed via ArcGIS Online, these cloud-based services enable seamless access to current ship and dive locations, tracks, and 3D visualizations of ROV operations. These services enhance situational awareness, improving coordination and scientific communication during active ROV missions.

Industry Support Web Pages Implemented

NCEI unveiled new industry landing pages, now live on the NCEI website. These websites spotlight the real-world impact of environmental data on the Architecture & Engineering, Insurance and Reinsurance, and Retail sectors. They showcase how environmental data empowers weather resilience for businesses, buildings and infrastructure, and the lives and livelihoods of U.S. citizens and are built in collaboration with industry leaders to improve decision making and support economic growth.

NCEI Climate Decommissions Three Products

NCEI removed three climate products from its portfolio in quarter three of FY25. These included the Billion Dollar Weather and Climate Disasters report, Hurricane Satellite data, and the Cloud Properties – International Satellite Cloud Climatology Project H-Series Climate Data Record. Existing data for these products will remain open and available, the products will not be updated moving forward.

Stakeholder Highlights

This May, NCEI participated virtually in the 2025 Unmanned Aircraft System Hurricane Symposium hosted by NOAA's Office of Marine and Aviation Operations Aircraft Operations Center and Uncrewed Aircraft Systems Division. This symposium brought together new and existing partners across NOAA and industry to collaborate and make progress towards a consensus on NOAA operational and research requirements through aviation platforms for hurricane season. Representatives from every NOAA Line Office, multiple branches of the Department of Defense, NASA, and academic and industry stakeholders participated in the symposium.

NCEI participated in the pilot kickoff meeting for a joint exercise with the Department of the Navy to explore Data Fabric capabilities. This data fabric aims to simplify and automate data integration, improve data quality, and enhance data accessibility for analytics and decision-making. Results are planned to be presented in late-August 2025.

NCEI participated virtually in the American Association of State Climatologists Annual Meeting. The meeting was co-hosted by the Kansas and Missouri State Climate Offices (SCOs). The NCEI partner presentation included information on Hurricane Helene recovery, recent staff changes, product updates, and upcoming product releases. Throughout the week, SCOs referenced the use and value of NCEI data and products and the support received during joint projects in helping them provide services to decision makers in their state.

NCEI hosted numerous webinars and workshops in support of our industry partners during the quarter. These included the American Society of Civil Engineers, the partners from the Reinsurance industry, and partners spanning the gamut of Retail, with a focus on the Retail Industry Leaders Association. The interactions informed development of new NCEI products and services, as well as provide critical insight into the impact of NOAA data and information to the nation's economic prosperity.

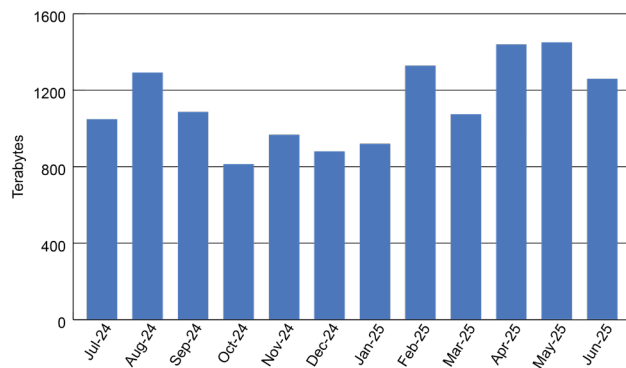

Upcoming Engagement

Storm Events Database Webinar	Jul. 24
Navy Commercial Engagement Through Ocean Technology Quarterly Planning	Aug. 13
Hurricane Season Update for Industry	Aug. 26

Customer Reach

NCEI Makes Data Accessible

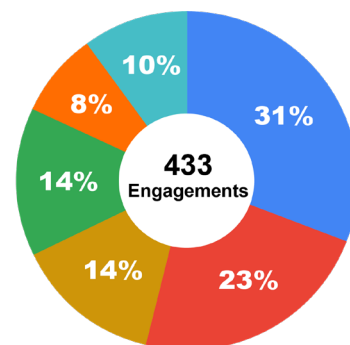

- 1.9 billion web hits and 4.1k TB of data delivered online*

*Analytics include model & satellite data; data statistics may not be comprehensive across NCEI (e.g. CLASS)

U.S. Sectors Served

- Top Sectors
- Other Services (except Public Administration)
- Educational Services
- Public Administration
- Professional, Scientific, and Technical Services
- Information
- Others (Combined)

Unique Customer Requests

Myanmar Earthquake Situational Awareness:

Following the magnitude 7.7 Mw earthquake in Myanmar this year, NCEI's Significant Earthquake data was used by numerous news outlets, emergency response agencies, and data analytics firms. The maps, charts, and reports created are being used to provide situational awareness to partners and media outlets, such as The Washington Post, Thai Public Broadcasting Service, European Union Civil Protection Mechanism, Asian Disaster Reduction Center, and Statista.

Ice Fall-Through Deaths Investigation:

NCEI received a request from the Department of Labor's Occupational Safety and Health Agency for information regarding weather, ice, and tidal conditions during a vehicular fall-through-the-ice-accident in early March 2025, in which two souls are presumed dead. NCEI's certified weather information was used to provide the information needed to support the investigation into the deaths.
